Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement:

Metro passengers often face problems while booking tickets, especially during busy hours. They have to stand in long queues at ticket counters, which wastes time and causes inconvenience. Manual ticket booking also takes more time and can lead to errors in fare calculation and ticket management.

There is no simple digital system to book metro tickets, make online payments, or keep track of booking details. Because of this, both passengers and metro staff face difficulties in managing the ticketing process.

To solve these problems, we developed the **Metro Ticket Management System** using **ServiceNow**. This system allows users to book metro tickets online through the Service Catalog, select the starting and destination stations, choose the payment mode, and automatically create the booking record using Flow Designer. It also supports digital ticket management, reports for booking analysis, and QR code generation as a future enhancement. This makes the ticket booking process faster, easier, and more efficient.
