Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Solution Fit:

The Metro Ticket Booking System developed on the ServiceNow platform provides a digital and automated solution to overcome the challenges of traditional metro ticketing. The system enables passengers to book tickets online by selecting source and destination stations, journey date, and passenger count through a user-friendly Service Catalog interface.

The solution automatically calculates fares based on predefined route information, eliminating manual calculations and reducing errors. Upon submission, the system generates a digital ticket, creates a request record, and sends booking confirmation notifications to the user. The integration of QR-code-based ticket generation further enhances convenience by enabling contactless ticket verification.

Additionally, administrators can manage metro stations, fare details, and monitor ticket booking trends through dashboards and reports. By digitizing the entire ticketing workflow, the solution reduces waiting time, improves operational efficiency, enhances user experience, and supports scalable metro transportation services.
