Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional metro ticket booking involves long queues, manual fare calculation, and physical ticket issuance, resulting in delays, inconvenience, and reduced passenger satisfaction. The project aims to digitize and automate the metro ticket booking process.
2.	Idea / Solution description	Develop a Metro Ticket Booking System using ServiceNow that enables users to select stations, enter journey details, automatically calculate fares, generate digital tickets, receive booking confirmations, and access QR-codebased tickets through a self-service portal.
3.	Novelty / Uniqueness	The solution combines Service Catalog, automated fare calculation, digital ticket generation, QR-code-based ticketing, notifications, and reporting within a single ServiceNow platform, providing an end-to-end metro ticketing solution.
4.	Social Impact / Customer Satisfaction	Reduces waiting time at ticket counters, promotes digital and contactless ticketing, improves commuter convenience, enhances travel experience, and increases overall customer satisfaction through faster and more efficient ticket booking.
5.	Business Model (Revenue Model)	Revenue is generated through metro ticket sales. The platform can also support additional revenue streams such as premium passes, subscription-based travel plans, advertisements, and integration with digital payment services.

6.	Scalability of the Solution	The solution is built on the ServiceNow cloud platform and can easily scale to support additional metro stations, routes, users, ticket volumes, and future enhancements such as mobile applications, payment gateways, and smart transit integrations.
